## **Economic Accounts for Agriculture (EAA)**

This is the seventh publication on Economic Accounts for Agriculture (EAA) compiled by Kosovo Agency of Statistics (KAS), respectively by the Department of Agriculture and Environment Statistics. The publication includes data for 2015.

The main data sources for compilation of Economic Accounts for Agriculture are two surveys carried out at KAS: Agricultural Household Survey (AHS) and Agricultural Price Statistics (APS). Other data sources are Agriculture Census, Veterinary Services and administrative data from Ministry of Agriculture, Forestry and Rural Development. If there are no data for certain items, experts' opinions have been used.

KAS started to compile the EAA in 2010 and the findings are published for the period 2005-2014. Data are compiled according to the methodology laid down by Eurostat: Manual on Economic Accounts for Agriculture and Forestry EAA/EAF 97 (Rev.1.1) and Commission Regulation (EC) No. 306/2005.

Economic Accounts for Agriculture (EAA) is a satellite account of the European System of Integrated Economic Accounts (ESA). It has been published by the Statistical Office of the European Communities (Eurostat) since 1964. Although the basic concepts and accounting rules are identical with those laid down in the ESA, the special characteristics and requirements of agriculture are also taken into consideration in the EAA.

The Economic Accounts for Agriculture (EAA) are based on Regulation (EC) No 138/2004 of The European Parliament and the Council of 5 December 2003 on the Economic Accounts for Agriculture in the Community.

Kosovo Agency of Statistics is grateful to the Swedish International Development Cooperation Agency (SIDA) for the support in building up the agro monetary statistics system. KAS is especially grateful to Swedish experts for Economic Accounts for Agriculture and Agricultural Price Statistics, Ms. Ann-Marie Karlsson, Mr. Tomas Eriksson, Mr. Daniel Persson, Mr. Jimmie Enhall, Mr. Ulf Svensson, Ms. Emma Wixe

and Statistics Sweden Long-term Adviser Mr. Carl-Magnus Jaensson and others who directly or indirectly assisted in the finalisation of this publication.

Suggestions, proposals and remarks for this publication are welcome and can be sent to: E- mail: agriculture@ks-gov.net.

This publication was prepared by the following personnel:

Bajrush Qevani - Director of Agriculture and Environment Statistics Department

Violeta Arifi Gashi - Chief of Agriculture Statistics Division

Edona Rexhepaj - Officer for Economic Accounts for Agriculture

November, 2016

Chief Executive of KAS,  
Isa Krasniqi

### **Abbreviations and Acronyms**

AC	-	Agriculture Census
AHS	-	Agricultural Household Survey
APS	-	Agricultural Price Statistics
EAA	-	Economic Accounts for Agriculture
EU	-	European Union
KAS	-	Kosovo Agency of Statistics
SIDA	-	Swedish International Development Cooperation Agency

## Economic Accounts for Agriculture (EAA) 2015

Figure 1 shows the total output for crops and animals for 2015 (production values at current prices).

Crop output increased by 8.0% in 2015 comparing to 2014. The increase in the value of crop output can be explained by the increase in production of vegetables and horticultural products and forage plants.

Animal output increased by 7.7% in 2015 comparing to 2014. The increase can be explained by the increase in animals and animals products.

Therefore, the total agricultural goods output increased by 7.9% in 2015 comparing to 2014.

**Figure 1: Crop output and animal output in million EUR, 2015**

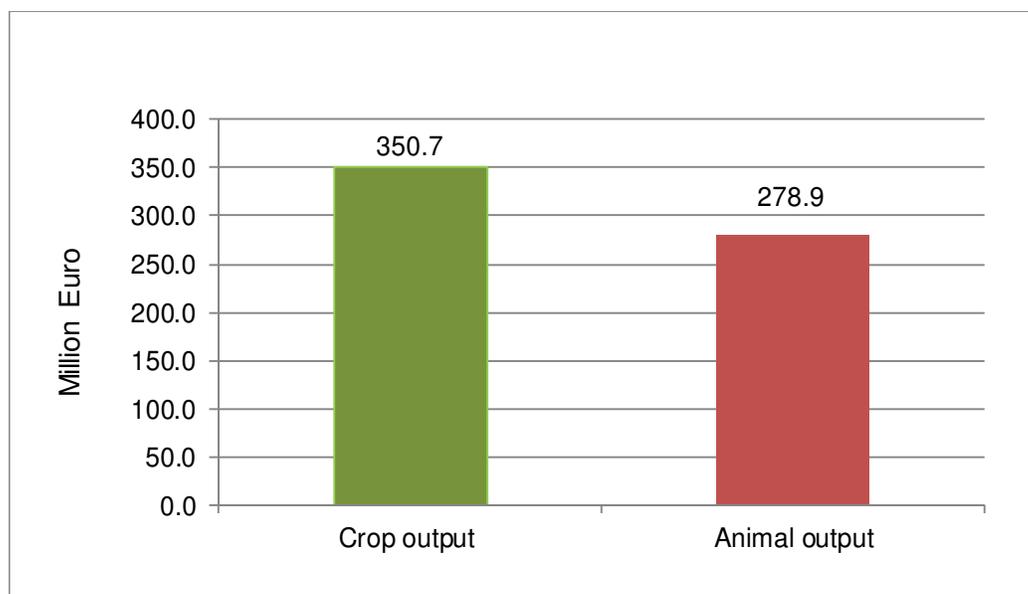

Figure 2 shows the share of crops in total crop output for 2015. Crop output includes: cereals, industrial crops, forage plants, vegetables and horticultural products, potatoes and fruits.

Vegetables and horticultural products is the most important category and constitute about 30.5% of total crop output, followed by cereals with 25.5%.

Forage plants, which also include plants produced and consumed at the same holding, constitute 20.4% of total crop output, fruits about 15.8% and potatoes 6.6%.

**Figure 2: Share of crops in total crop output, 2015**

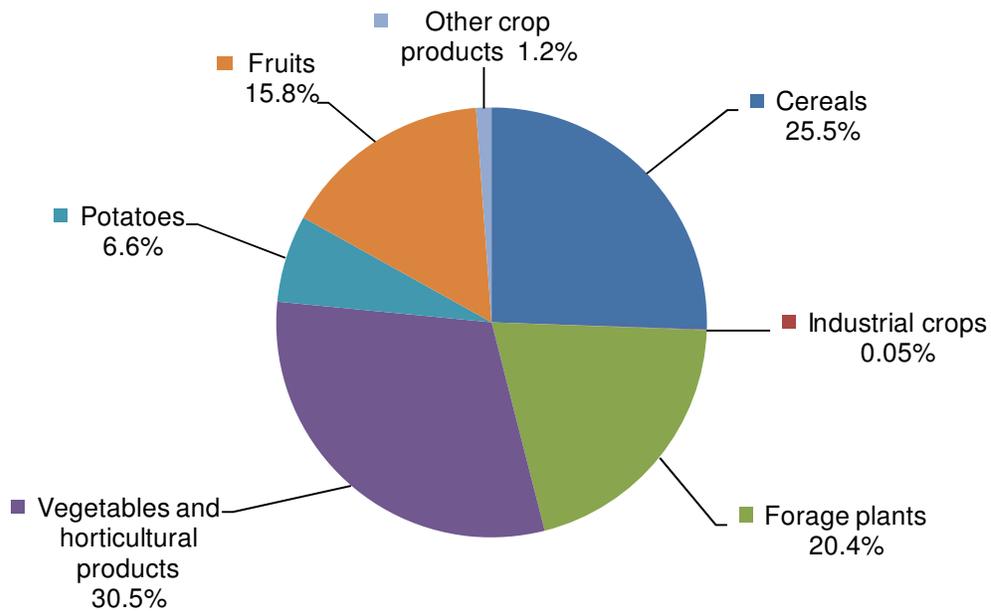

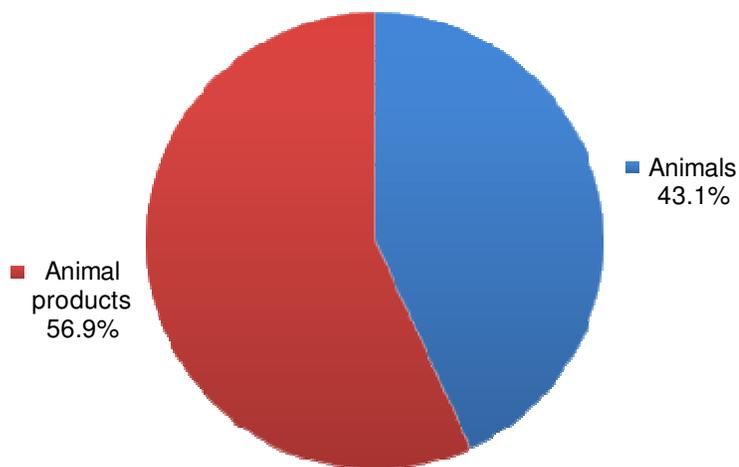

Figure 3 shows the share of animals and animal products in total animal output for 2015. In animal products it is included: milk, eggs, honey and raw wool.

Milk is the most important animal product; it contributes with 132.6 out of total 158.6 million euros of animal products in 2015. Milk had a decrease by 12.2% between the year 2014 and 2015.

**Figure 3: Share of animals and animal products in total animal output, 2015**

Animals category mainly includes sales of meat from cattle, pigs, sheep, goats, poultry and other animals.

Figure 4 shows the share of animals by type for 2015. It shows that the sales of meat are the most important from cattle, followed by sheep and goats and poultry.

**Figure 4: Share of animals by type, 2015**

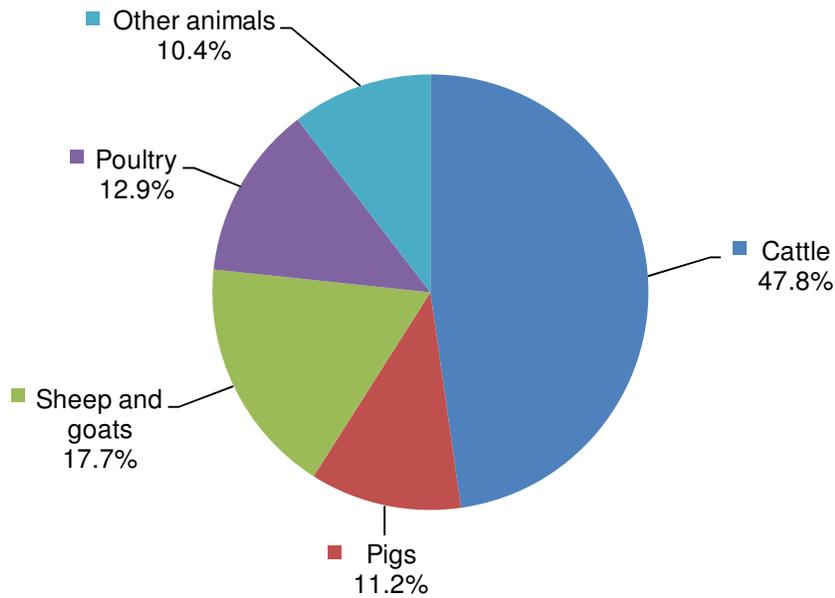

Figure 5 shows the contribution of crop output, animal output and agricultural services in total agricultural production in million EUR for 2015.

**Figure 5: Crop output, animal output and agricultural services in million EUR, 2015**

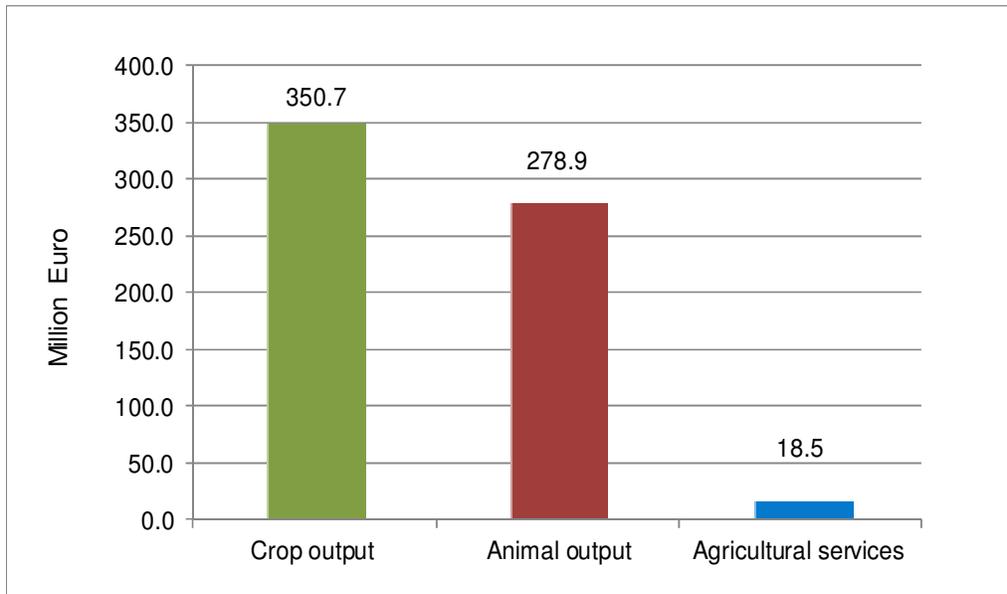

Figure 6 shows the total intermediate consumption for the period 2014-2015. Total intermediate consumption has been estimated about 239.3 million Euro in 2015, which is an increase by 2.6% comparing to 2014.

**Figure 6: Total intermediate consumption in million EUR for the period 2014-2015**

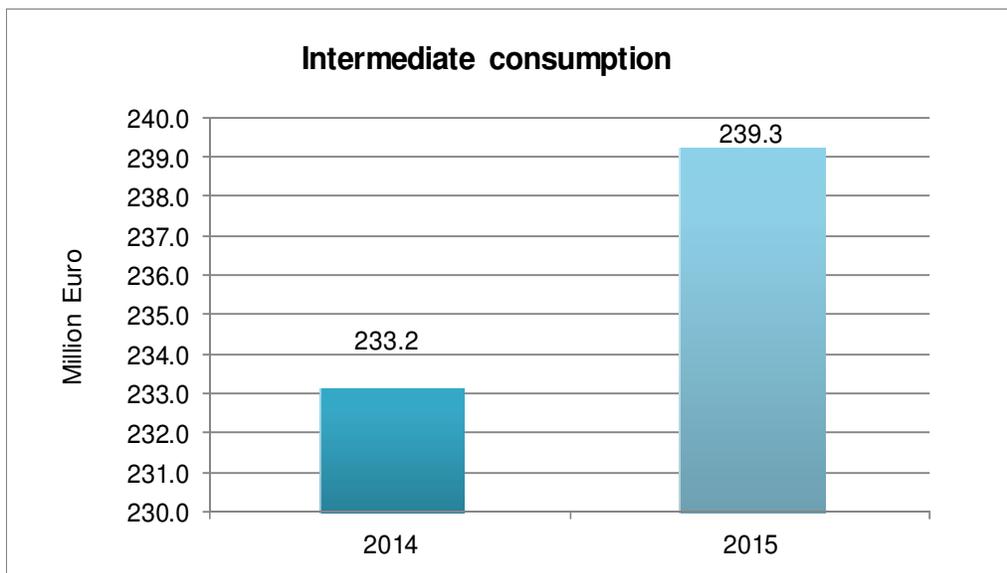

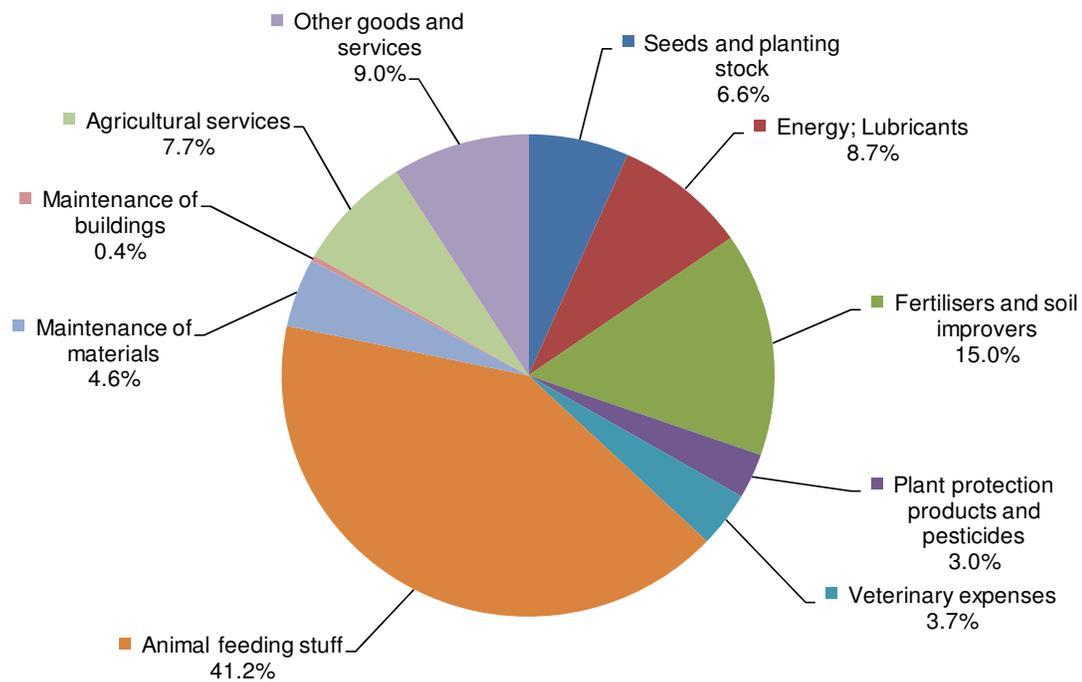

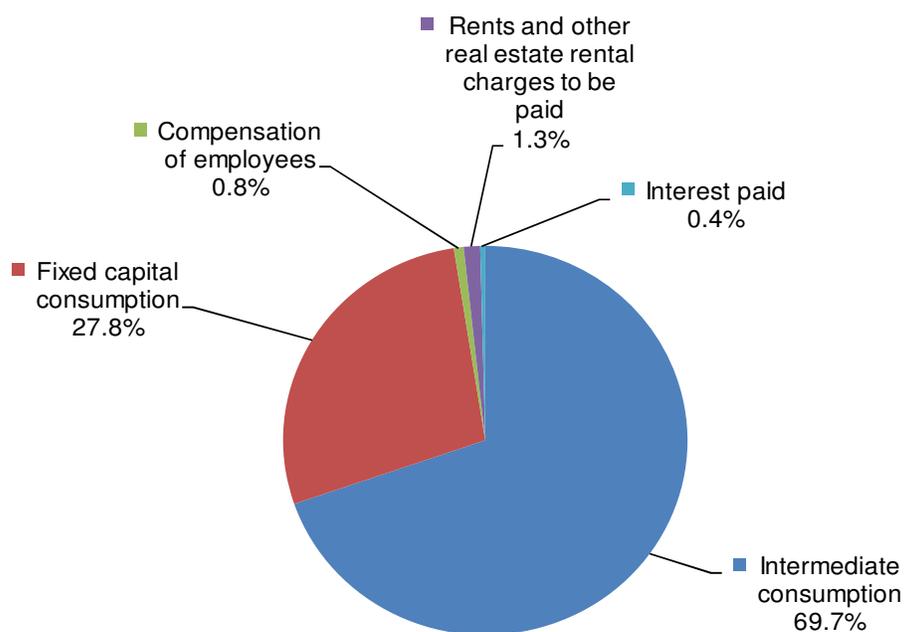

Figure 7 shows the structure of intermediate consumption for 2015. Animal feeding stuff constitutes about half of the intermediate consumption, around 41.2%. Animal feeding stuff includes feeding stuff that the farmer buys from other farmers or compound feeding stuff and feeding stuff that the farmer produces on the farm. Energy costs constitute about 8.7% and fertilizers constitute about 15.0% of the total intermediate consumption, while veterinary expenses and agricultural services i.e. contract work, constitutes 3.7 and 7.7% respectively.

**Figure 7: Structure of intermediate consumption, 2015**

The chart below shows various expenses that take place on the farms during the year. The most significant category for 2015 is the intermediate consumption, which contributes with about 69.7%, followed by fixed capital consumption, 27.8%.

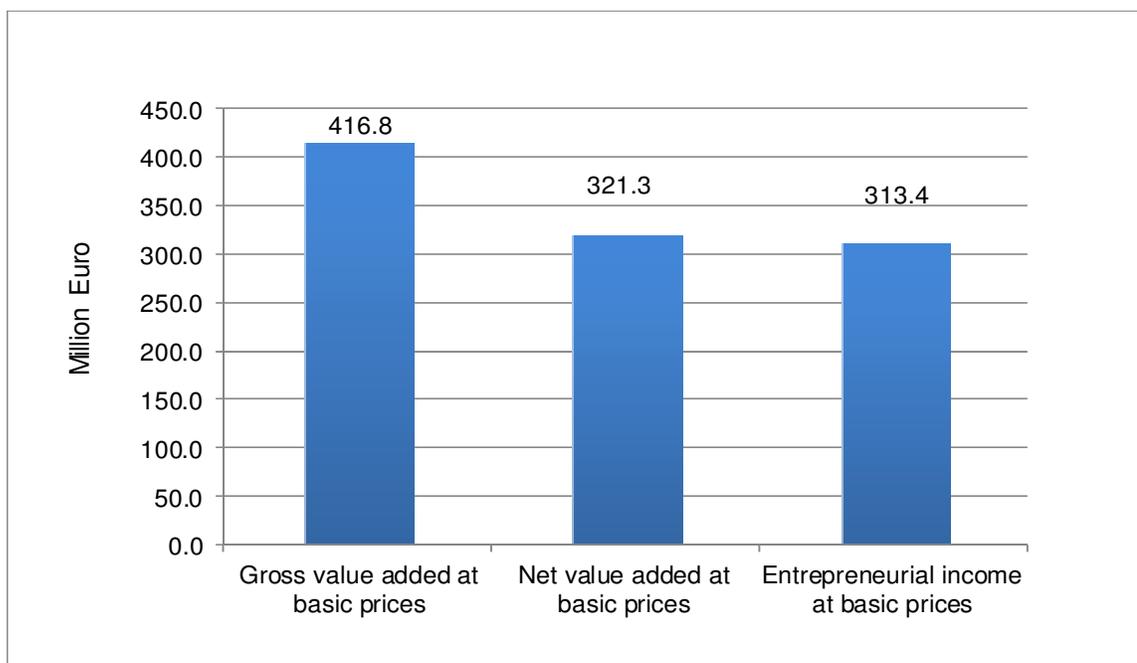

**Figure 8: Inputs in agriculture by categories, 2015**

Gross value added is defined as the difference between total output from the agricultural industry and intermediate consumption. The gross value added amounted to 416.8 million euro in 2015, which is an increase by 10.5% comparing to 2014.

Net value added is defined as the total output from the agricultural industry less the expenses of intermediate consumption and fixed capital consumption. The net value added amounted to 321.3 million euro in 2015, which is an increase by 12.0% comparing to 2014.

Entrepreneurial income is defined as the sum of net value and subsidies on production added less compensation for employees, taxes on production, rents and interests on loans. Entrepreneurial income increased by 12.3% in 2015 comparing to 2014.

**Figure 9: Income aggregate for agriculture in million EUR, 2015**

## **Methodology of Economic Accounts for Agriculture**

Economic Accounts for Agriculture are a satellite account of the European System of Integrated Economic Accounts (ESA), an accounting system that follows the UN recommendations on national accounts. They cover the agricultural products and services produced during the accounting period that are sold by agricultural units, held in stocks on farms, or used for further processing by agricultural producers.

The EAA is intended to highlight the economic development of the national agricultural sector and can be used as a basis for agricultural policy assessment of the agricultural sector changes.

The concepts of the Economic Accounts for Agriculture are adapted to the particular nature of the agricultural production: for example, the EAA include not only the production of grapes and olives but also the production of wine and olive oil by agricultural producers, as well as information on intra-unit consumption of crop products used in animal feed, output accounted for own-account production of fixed capital goods and own final consumption of agricultural units. The EAA data can be used to calculate income indicators for the agricultural sector.

The EAA reports production values and costs to both the producer price and base price. EAA to the base price includes direct payments (subsidies), which are not included in the EAA to the producer price. Moreover, direct payments are divided into product-resp. production-related direct payments. Production-related direct payments, such as environmental, are reported under a separate item.

### **Definitions and explanations**

The EAA includes:

- + The value of crop output
- + The value of livestock production
- + Income from agricultural services
- = Total output

- Intermediate consumption
- = Gross value added

- Consumption of fixed capital

= Net value added

+ Other subsidies on production

= Factor income

- Compensation of employees

= Net operating surplus

- Rent

- Interest

= Net entrepreneurial income

Net operating surplus measures the yield from land, capital and unpaid labour. It is the balance of the generation of income account, which indicates the distribution of income between the factors of production and the general government sector. The net value added and net operating surplus are calculated for the industries.

Net value added of the agricultural primary production measures the value created by all the agricultural units after the consumption of fixed capital.

Gross value added of the agricultural primary production measures the results of the production. It is the difference between the value output and the value of intermediate consumption.

# Kosovo Agency of Statistics

## *short description*

**Kosovo Agency of Statistics** is a professional institution which deals with collection, processing and publication of official statistical data. As such acts since 1948 and has passed through several historical stages, structured according to state regulation of those times.

On 2 August 1999, the Agency has resumed his professional work (after nine years of interruption of all statistical series detrimental to the interest of Kosovo), as an independent institution under the Ministry of Public Administration. Since 12.12.2011 the Agency operates in the frames of the Prime Minister's Office. Office is funded by the Kosovo Consolidated Budget, but also by donors for specific projects and for technical professional support.

**Kosovo Agency of Statistics** acts according to the Law No. 04/L-036 which entered into force on 12.12.2011. Strategic development plan 2009-2013 is the middle term implementation for the development of statistical system in correlation with the European Union statistics (EUROSTAT).

**Kosovo Agency of Statistics** has this organizational structure: production departments; (Department of Economic statistics and National Accounts, Department of Population statistics, Department of Agriculture and Environment statistics and Department of Social statistics. **Support Departments;** (Department of Methodology and Information Technology, Department of Administration. **Within the Agency we also established. Regional Offices;** Gjakove, Gjilan, Mitrovica, Peja, Prizren, Pristina and Ferizaj

Number of employees and budget are still limited. Employees are total of 134 workers, of them 96 (71.6%) at the headquarters of the Agency, while in the Regional Offices, 38 (28.4%), with qualifying structure, 65.4% with university education to 34.6% with secondary education.

We have professional and technical cooperation with all ministries of the Government of Kosovo, especially with the Ministry of Economy and Finance, Central Bank of Kosovo, with international institutions, EUROSTAT, International Monetary Fund, World Bank, Sweden's SIDA, DFID, UNFPA, UNDP, UNIVET, and with the statistical institutions of the countries in the region.

**Kosovo Agency of Statistics** almost completely covers the territory of Kosovo, based on the statistical structure of the enumeration areas as the basic unit and sole in the country from which it gets first hand information. All surveys conducted in the field use the extension of the samples in these enumeration areas but also a statistical methodology according to international recommendations. During the collection of statistical data and reports from reporting entities are involved professionals, technicians, administrators, servants of the country offices, field enumerators from regional offices, etc.

We have successfully implemented the project of Population Census, Households and Dwellings in 2011, Census that was not carried out since 1981. Results obtained from the Census will have an important role in compiling the development policies.

**The mission of the Agency;** to meet the needs of users with qualitative statistical data, objective, in time and space so that users have reliable base to conduct regular analysis in the interest of planning and project development at the municipal and country level. To support government institutions, scientific institutes, research academies, businesses in order to provide proper information for decision-makers and other users in Kosovo.
