P r e f a c e

Agriculture and Environment Statistics Department started to collect data on prices for agriculture products in November 2003. In the beginning, prices were collected for a limited number of items. At the moment prices for 64 different items concerning agricultural output are collected. The plan for the future is to both increase the number of products and also to complement it with an Input Price Index.

This is the tenths publication on Output Price Index and Average Absolute Prices for agriculture products produced by Statistical Office of Kosovo (SOK). In this publication, Output Price Index and prices for some major agriculture products are presented.

SOK is grateful to the Swedish International Development Cooperation Agency (SIDA) for their support of build up the agro monetary statistics system. SOK also is grateful for their corporation of all co-workers at the regional offices, other respondents of data collection as: agriculture farms, industrial and trade enterprises etc.

Especially grateful to Swedish price statistics experts Mr. Tomas Eriksson, Mr. Daniel Persson and Statistics Sweden Long-term consultant Mrs. Milva Ekonomi and others who directly or indirectly assisted on finalization of this publication.

This publication was prepared by following personnel from Agriculture and Environment Statistics Department at SOK.

Bajrush Qevani - Director of Department,
Haki Kurti – Chief of Division,
Violeta Arifi – Gashi – Chief of Section,
Kademsha – Bajramaga –Senior Officer
Design: Ahmet Cakolli.

Output Price Index for agriculture products fourth quarter 2008

The publication includes data from January to December 2008. To make comparisons and see changes there are also data from year 2007 and November 2003, (November 2003=100).

This publication is based on collection of prices for domestic products in Kosovo. The price collection was carried out at markets, farms and other places where prices on agriculture products are available.

The products which make up the base for the Output Price Index are divided into two main groups: Crop- and Animal Output. Within Crop Output, prices are collected under the following groups; Cereals, Industrial crops, Forage plants, Vegetables, Potatoes and Fruits. Within Animal Output, prices are collected for Animals and Animal Product. For Animals prices are collected for four categories; Cattle, Sheep, Pigs and Poultry. These prices are based on the live weight of the animals. Within animal products prices are collected for Milk, Eggs and Honey. All prices are calculated in Euro and the measurement unit is in kg, liter and piece.

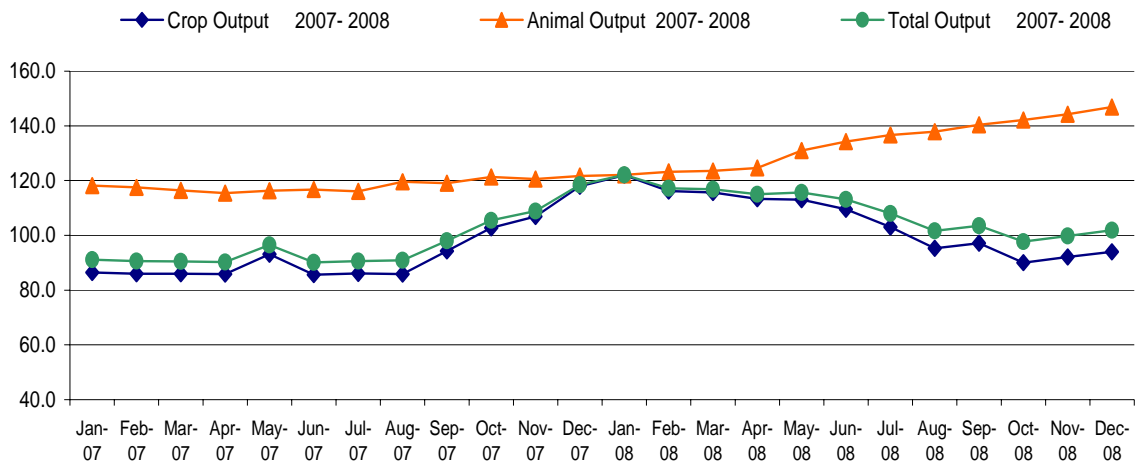

Base year for the index calculations will be changed. SOK is working to change the base year calculation of the Agriculture Price Index. In the next publication Index will be presented with base year 2005 = 100.

The annual Index for agriculture products has increased in 2008. This is due to higher cereal prices in all over Europe and wider. Another reason of the index increasement is linked with the national production especially forage plants, some type of vegetables (beans) and fruits (apple, grape), that demonstrated price increase.

Figure 1, Shows monthly Output Price Index from January - December 2007 and 2008 for Total Output as well as for Crop- and Animal Output (November 2003 = 100).

In 2008 the annual index for Animal Output has increased with 13.3 % compared with 2007. On the other hand the index for Crop Output has increased with 13.4 % between 2007 and 2008. Total Output Index has also increased with 13.3 % compared with 2007.

4 - 1 Wheat – is domestic, 2 Barley for production of beer, 3 Maize – Hybrid 448, 4 Sunflower, 5 Hay produced in meadow, 6 Wheat straw (Stubble wheat), 7 Lucerne, 8 Cabbage (Hybrid 4), 9 Onions- second quality, 10 Pepper- variety Sombork, 11 Spinach- variety Matador, 12 Beans- second quality, 13 Tomatoes- variety Arleta, 14 Cucumber- variety Comishon, 15 Watermelon– is domestic product, 16 Leek, 17 Garlic, 18 Potatoes- variety Condor, 19 Apple –variety Ida red, 20 Pear-variety autochthones, 21.Plums–variety Stanley, 22 Chestnuts – domestic product, 23 Grapes-variety Hamburg, 24 Live weight per 1kg for bulls and heifers aged 18-22 months domestic pedigree, 25 Live weight per 1kg for pigs aged 10-12 months domestic pedigree, 26 Live weight per 1kg for sheep domestic pedigree (white, mug) aged older than 12 months, 27 Hens– domestic (18 weeks old), 28 Milk –price for 1litre cow milk with 3.2% fat, 29 Honey domestic product, 30 Price for 30 pieces of eggs, first class of quality

Methodology

Price indices in this publication have been calculated according standards for price statistics in European Union. The project for calculating these prices and price indices was conducted in the frame of the project of "Improving agro monetary statistics" in cooperation with Statistic Sweden and with financial support by Sida (Swedish International Development Cooperation Agency).

Prices have been collected since November, 2003 and are collected in seven regions: Peja, Pristina, Prizren, Ferizaj, Gjilan, Gjakova, and Mitrovica regions. Prices are collected around the 15th in every month.

Prices are collected for 64 products and measures prices that farmers receive for the production that are sold outside the sector.

Preliminary weights to calculate aggregated indices are mainly based on agriculture household survey 2002. In the future these weights should be obtained from the Economic Accounts for Agriculture (EAA).

Base month for the index calculations is November 2003 (Nov 2003=100).

Calculation of elementary Price Index

Calculations of elementary indices are in general done by using following formula, with un-weighted arithmetic mean price.

$$R_i^t = \frac{\frac{1}{n} \sum P_{ij}^t}{\frac{1}{n} \sum P_{ij}^o} \cdot 100$$

R_i^t – Elementary index for month t and product i

P – Collected price

i – Product i

j – Price j recorded for product (in general price for region)

t – Observed month

0 – Base month

Calculation of aggregated Price Index

Calculating aggregated index for total Output or subgroups of Output Index is done using following formula.

$$I^t = \sum R_i^t \cdot \frac{w_i^0}{\sum w_i^0}$$

I^t – Aggregated index for period t

w_i^0 – Weighting factor in base period for product i

i – Product i

t – Observed month

0 – Base month

Statistical Office of Kosovo, a brief description

The Statistical Office of Kosovo (SOK) is a professional office operating since 1948. The SOK passed through some of the historic phases and it has been structured by the state rule of that time. SOK restarted its work on August 2, 1999, as an independent and professional office working in the frames of the Ministry of Public Services (MPS). SOK is financed by the Kosovo Consolidated Budget and by donors for the various projects.

The Statistical Office of Kosovo acts pursuant the UNMIK Regulation 2001/14 that entered into force on July 2, 2001. A medium-term Master Plan is being developed for the statistical system of Kosovo compatible with the European Statistics.

The SOK Organization Structure; composes of four departments for production of statistics (Department of Economic Statistics and National Accounts, Department of Population Statistics, Department of Social Statistics and Department of Agricultural and Environment Statistics), seven Regional Offices (located in Gjakova, Gjilan, Mitrovica, Peja, Prizren, Pristina and Ferizaj), two support departments (Department of Methodology and Information Technology, and Department of Administration), as well as the Office of the Population Census.

Total number employees is 134, of them 96 (71.6%) within the SOK offices whilst 38 (28.4%) in regional offices.

There is also a support and cooperation with the international institutions.

The Statistical Office of Kosovo covers Kosovo entirely. For implementation of the surveys in the field, the SOK uses appropriate sampling and methodology approach. In the collection of the reports from the reporting units, the SOK engages professionals, technicians, administrators and civilians from the local offices and regional field population census.

Recently, a team of national and international experts is working in the project of the population census.

SOK Mission is to fulfill the needs of the users with the reliable statistical data and with regular analyses in order to support and provide government departments with the proper information for decision-making process including other users as well.
