Brief history

The data for marriages for the years 1900 -1912 were obtained through Turkish tefter's books administrated in special administrative offices and in religious institutions.

Even in the period 1921 - 1939, data on vital statistics were provided mainly through religious institutions (churches and mosques), a small portion is provided through state civil registers.

After World War II, on 9th of May 1946 the Law on Marriages and Law on State Register Books were approved and this matter was carried in competencies of state bodies.

Data collection was done on a monthly basis by clerks. Collected monthly data were preliminary results.

After 1951 data were collected through the individual questionnaire and then processed and resulted in final data, according to permanent residence and the time when the event occurred.

The first attempts to start the operation of this institution were made at the end of 1999 when UNMIK establishes new civil register by providing registry books and new certificates.

In August of 2001 begins the collection of data for marriages.

Source of data

Reporting units of data for marriages are the Offices of Civil Registry-Officials.

Data are collected by special statistical questionnaire for marriages, DEM-3, and the results of demographic statistics are processed according to the principle of permanent residence of the married couple.

This publication contains information about the marriages that occurred in 2016, presented in tabular form, nationally and according to municipalities, according to characteristics such as age, ethnicity, education, etc.
