Foreword

Kosovo Agency of Statistics, respectively the Department of Agriculture and Environment Statistics, has started to collect data on agriculture output prices since November 2003. At the beginning, the number of items was limited. With the change of the base year from 2003 to the base year of 2005, prices have been collected for 64 different agricultural outputs. Whereas, with the change of the base year 2005 to 2010, prices for 67 agricultural outputs were collected. Currently, with the change of the base year from 2010 to the base year 2015, prices are collected for 71 different agricultural outputs. The purpose of the agricultural output index is to measure the price movements for the products sold by the farmer. The plan for the future is to increase the number of outputs. In addition to the output price index is also the input price index.

This is the forty-eighth publication (48) on the agriculture output price index and the average absolute prices of agriculture outputs, prepared by the Kosovo Agency of Statistics. In this publication, the agriculture output price index has been presented for some major agricultural products.

KAS thanks the Swedish International Development Cooperation Agency (SIDA) for their support for building the agro-monetary statistical system. KAS also thanks all collaborators of its regional offices, other co-operators (respondents) of point-of-sale places such as: agricultural farms, industrial enterprises, trade, etc.

In particular, KAS thanks Swedish price statistics expert, Mr. Anders Grönvall and others who directly or indirectly assisted in finalizing this publication.

Suggestions and remarks regarding this publication can be sent to the department's email address: agriculture@ks-gov.net

Publication was prepared by:

Bajrush Qevani – Director of Department,
Violeta Arifi – Gashi – Head of Division,
Kademsha Bajramaga – Officer.

Agriculture Output Price Index

The data presented in this publication include data on the monthly, quarterly and annual index covering the period 2015-2017. To make the comparisons and to observe the changes, data for 2015-2017 are presented in the base year of 2015 (2015 = 100)

KAS has changed the base year from 2010 = 100 in 2015 = 100 according to Eurostat methodology.

In this publication are collected the prices of local agriculture outputs in Kosovo. Price collection is done in markets, farms and other places.

The products that make up the base for the agriculture output price index are divided into two main groups: Crop and Animal Output (plant and livestock products).

Within crop output, prices are collected for these groups: cereals, forage plants, vegetables, potatoes and fruits.

In animal output, prices have been collected for livestock and livestock products. Within livestock, prices are collected for four categories of animals: cattle, sheep, pigs and poultry. These prices are based on live weight of animals. Within livestock the output prices are collected for: milk, eggs and honey. All prices are calculated in Euro and the units are in kg, liter and pieces.

Annual change of index 2017 compared with 2016 (change in%)

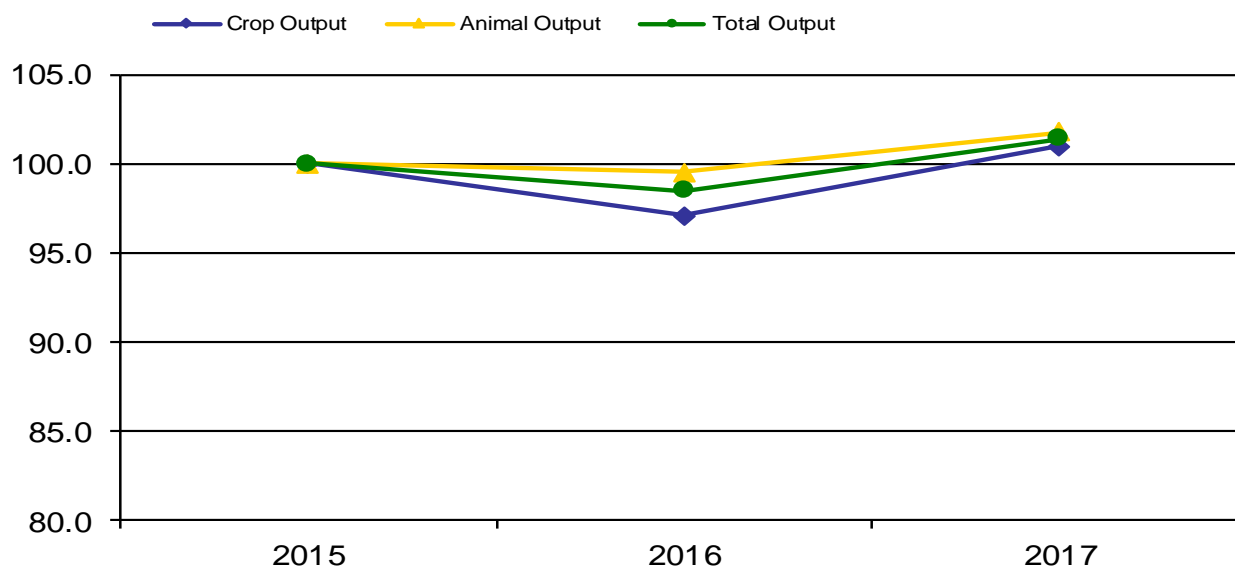

In 2017, the annual price index of crop output increased by 4.0% compared to 2016. Meanwhile, the animal output price index rose by 2.2% in 2017, compared to 2016. While, the general price index of agricultural outputs for this period increased by 3.0%.

Annual change of index 2017 compared to 2015 (change in%)

In 2017, the annual price index of crop output increased by 1.1% compared to 2015. Meanwhile, animal output price index increased by 1.8% in 2017 compared with 2015. In contrast, the annual general index of agricultural outputs increased by 1.4% in 2017, compared with 2015.

Graph 1 presents the annual price index for crop and animal output for the period 2015-2017, as well as the general index of agricultural outputs with the base year (2015 = 100).

1.

- 1 Wheat – is domestic, 2 Barley , 3 Maize – Hybrid 448, 4 Rye, 5 Oats , 6 Hay produced in meadow, 7 Wheat straw (Stubble wheat), 8 Lucerne, 9 potatoes, 10 Cabbage (Hybrid 4 11 Onions- second quality, 12 Pepper- variety Sombork, 13 Spinach- variety Matador, 14 Beans- second quality, 15 Tomatoes- variety Arleta, 16 Cucumber- variety Cornishon, 17 Watermelon– is domestic product, 18 Leek, 19 Garlic, 20 Apple, 21 Pear ,22 Chestnuts, 23 Grape, 24 Walnuts, 25 Live weight per 1kg for bulls and heifers aged 18-22 months domestic pedigree, 26 Live weight per 1kg for pigs aged 10-12 months domestic pedigree, 27 Live weight per 1kg for sheep domestic pedigree (white, mug) aged older than 12 months, 28 Chicken (Village)– domestic (18 weeks old), 29 Chicken (farms)– domestic (18 weeks old) , 30 Milk –price for 1litre cow milk with 3.2% fat, 31 Honey domestic product, 32 Price for 30 pieces of eggs, first class of quality

Graph 2: Annual prices for wheat and maize 2015-2017, Euro /kg

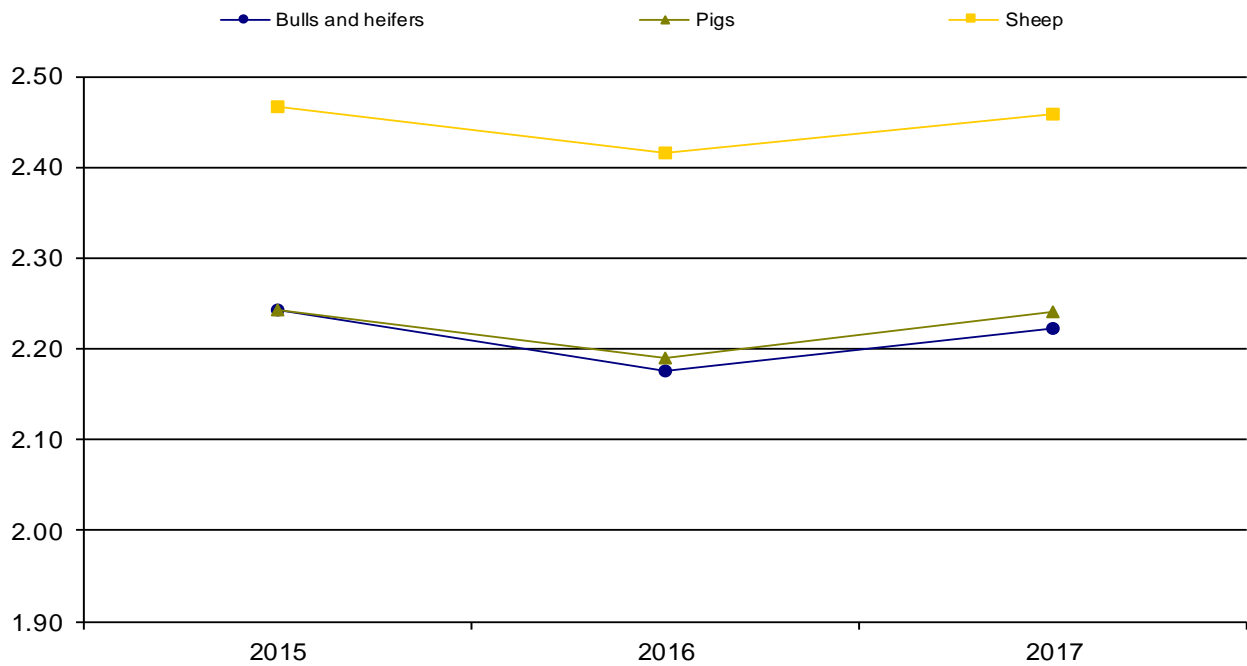

Graph 3: Annual prices for hay, straw and Lucerne 2015-2017, Euro /kg

Graph 4: Annual prices for potatoes, tomatoes, pepper and cabbage 2015-2017, Euro /kg

Graph 5: Annual prices for bulls and heifers, pigs and sheep (live weight price) 2015-2017, Euro /kg

Methodology

Prices and Price indices in this publication have been calculated according standards for price statistics in European Union. The project for calculating these Prices and Price Indices was conducted in the frame of the project of “Improving agro monetary statistics” in cooperation with Statistic Sweden and with financial support by Sida (Swedish International Development Cooperation Agency).

Prices have been collected since November 2003 and are collected in seven regions: Pristina, Mitrovica , Peja, Gjakova ,Prizren, Ferizaj and Gjilan,. Prices are collected around the 15th in every month. Since the start the number of different prices that are collected have increased step by step. Therefore some prices are not available for the whole period. Prices are now collected for 71 products and measures prices that farmers receive for the part of their production that are sold. Weights to calculate aggregated indices are mainly based on Economic Accounts of Agriculture (EAA) from 2015, which is the base year in the indices (2015=100). It should be pointed out that the weights, in value or promille, only reflect the part of the agricultural production in Kosovo that are sold outside the agricultural household. For some products the value of the total production can be considerably higher than what is reflected in the weights.

According to EU standards, quarterly and annual indices are supposed to be calculated by each member state. The EU indices in this publication follow the methodology developed in EU. For national needs, also a monthly index is calculated. This index is calculated slightly different from the quarterly index. In short, the monthly index does not use monthly weights on aggregated level (when calculating code 10, 13 and 14). However for most crop groups (code 01, 03, 04 and 06) monthly weights are used within the group to calculate the group aggregates. On the other hand the quarterly index have variable quarterly weights everywhere. For this reason, the monthly and the quarterly indices might have slightly different developments if they are compared. However, the EU annual index and the Kosovo annual index are exactly the same. In both cases, the index is calculated as weighted annual index with monthly respectively quarterly weights.

The total weights, quarterly weights and monthly weights are fix during the base period. They all reflect the situation that was present in 2015. By having fix weights, the index is guaranteed only to measure price movements, which is the purpose of the index.

To compare the EU index presented in this publication with other countries, the Eurostat website is recommended (<http://epp.eurostat.ec.europa.eu/portal/page/portal/eurostat/home>).

Calculation of elementary Price Index

Calculations of elementary indices are in general done by using following formula, with un-weighted arithmetic mean price.

$$R_i^t = \frac{\frac{1}{n} \sum P_{ij}^t}{\frac{1}{n} \sum P_{ij}^o} \cdot 100$$

R_i^t – Elementary index for month t and product i

P – Collected price

i – Product i

j – Price j recorded for product (in general price for region 1,2,...,n)

t – Observed month

0 – Base month

Calculation of aggregated Price Index

Calculating aggregated index for total Output or subgroups of Output Index is done using following formula.

$$I^t = \sum \left(R_i^t \cdot \frac{w_i^0}{\sum w_i^0} \right)$$

I^t – Aggregated index for period t

w_i^0 – Weighting factor in base period for product i

i – Product i

t – Observed month

0 – Base month

Questionnaire
