## **Economic Accounts for Agriculture (EAA), 2016-2017**

This is the ninth publication of the Economic Accounts for Agriculture prepared by the Kosovo Agency of Statistics (KAS), respectively by the Department of Agriculture and Environment Statistics. Publication includes data for 2016 - 2017.

The main data sources for the compilation of Economic Accounts for Agriculture are the two surveys carried out by the Kosovo Agency of Statistics: Agricultural Households Survey (AHS) and Statistics of Agricultural Prices (SAP). Other sources of data are: Agriculture Census, Veterinary Services and administrative data from the Ministry of Agriculture, Forestry and Rural Development. In the absence of data sources for specific items, experts assessments were used. In this publication there may be slight differences with the data published last year (EAA 2016) due to new data available for 2016 which are included in the estimation. Therefore, this publication includes the latest data for the period 2016-2017.

The compilation of the Economic Accounts for Agriculture in KAS started in 2010 and the findings were published for the period 2005-2016. Data are compiled according to the methodology set by Eurostat: Manual on the economic accounts for Agriculture and Forestry EAA/EAFF 97 (Rev.1.1) and Commission Regulation (EC) No. 306/2005.

Economic Accounts for Agriculture (EAA) are the satellite accounts of the European System of Integrated Economic Accounts (ESA). They have been published by the Statistical Office of the European Communities (Eurostat) since 1964. Although the basic concepts and estimation rules are identical to those laid down in ESA, the specific characteristics and requirements in agriculture have also been taken into account at EAA.

Economic Accounts for Agriculture (EAA) are based on Regulation (EC) No.138/2004 of the European Parliament and of the Council of 5 December 2003 on Economic Accounts for Agriculture in the Community.

Kosovo Agency of Statistics thanks the Swedish International Development Cooperation Agency (SIDA) for its support in building the agromonetary statistics system. KAS is particularly grateful to Swedish experts on Economic Accounts for

Agriculture and Agriculture Statistics, Mrs. Ann-Marie Karlsson, Mr. Tomas Eriksson, Mr. Daniel Persson, Mr. Jimmie Enhall, Mr. Ulf Svensson, Mrs. Emma Wixe, and others who directly or indirectly assisted in finalizing this publication.

Suggestions, proposals and remarks for this publication are welcome and they can be sent to: [agriculture@ks-gov.net](mailto:agriculture@ks-gov.net).

This publication was prepared by the following staff:

Bajrush Qevani - Director of Department of Agriculture and Environment Statistics

Violeta Arifi Gashi - Chief of Division for Agriculture Statistics

Edona Rexhepaj - Officer for Economic Accounts for Agriculture

October, 2018

Chief Executive Officer, KAS  
Isa Krasniqi

## Economic Accounts for Agriculture (EAA), 2016-2017

Graph 1 shows total crop and animal output for 2016-2017 (value at current prices). Crop output has decreased by -2.4% in 2017 compared with 2016. Decline in the value of crop output can be explained by the decrease in cereal and fruit production. Animal output increased by 0.1% in 2017 compared with 2016. Growth can be explained by the increase in the value of animal output. Hence, total crop and animal output decreased by -1.3% in 2017 compared with 2016.

**Graph 1: Crop and animal output in million euro, 2016-2017**

Graph 2 shows the average distribution of agricultural crop in total crop output in 2016-2017. Crop output includes: cereal, industrial crop, fodder crop, vegetables and garden output, potatoes and fruits.

Vegetables and garden output are the most important category and account for about 29.8% of the total crop output, followed by fodder crop by 24.0%.

Cereal account for 23.0% of total crop output, fruits around 14.0% and potatoes 8.2%.

**Graph 2: Distribution of agricultural crop in total crop output, 2016-2017**

Graph 3 shows the average distribution of animala and animal output to total animal output for 2016-2017. In animal output are included: milk, eggs, honey and crude wool.

Milk is the most important animal output; in 2017 contributes with 109.8 out of 141.0 million euros in animal output. Milk has increased by 1.1% in 2017 compared with 2016.

**Graph 3: Average distribution of animals and animal output in total animal output, 2016-2017**

The category of animals mainly includes the sale of meat from cattle, pigs, sheep, goats, poultry and other animals.

Graph 4 shows the structure of animals by type in 2016-2017. The Graph shows that beef sales are the most important, followed by poultry meat, sheep and goat meat, and pig meat.

**Graph 4: Average distribution of animals by type, 2016-2017**

Graph 5 shows the average participation of crop output, animal output and agricultural services in total agricultural output for 2016-2017 in million euro.

**Graph 5: Crop output, animal output and agricultural services in million euro, average for 2016-2017**

Graph 6 shows the total intermediate consumption for the period 2016-2017. The total intermediate consumption is estimated at about 270.6 million euros in 2017, an increase by 5.3% compared to 2016.

**Graph 6: Total intermediate consumption for the period 2016-2017**

Graph 7 shows the intermediate consumption structure as the average for 2016-2017. Animal feed accounts for about half of the intermediate consumption, about 44.9%. Animal feed includes the food that the farmer buys from other farmers or raw materials and the animal feed that the farmer produces on the farm itself. Energy expenditures account for about 8.2% and fertilizers account for about 12.2% of total intermediate consumption, while veterinary expenditures and agricultural services, eg. the contractual work is 4.7% and 8.4% respectively.

**Graph 7: Intermediate consumption structure, average for 2016-2017**

The Graph below shows the various expenditures incurred in agricultural households during the agricultural year, as average for the years 2016-2017. The most important category is the intermediate consumption which accounts for about 70.0%, followed by consumption of fixed capital by 27.6%.

**Graph 8: Inputs in agriculture by category, 2016-2017**

Gross value added is defined as the difference between total output from the agricultural industry and intermediate consumption. Gross value added amounted to 463.7 million euros in 2017, which represents a decrease by -4.4% compared to 2016.

Net value added is defined as total output from the agricultural industry, minus intermediate consumption expenditure and consumption of fixed capital. Net value added amounted to 358.3 million euros in 2017, which represents a decrease by -6.3% compared to 2016.

Entrepreneurial income is defined as the amount of net value added, plus subsidies on production, minus employee compensation, production taxes, rents and interest on loans. Entrepreneurial income has decreased by -6.9% in 2017 compared to 2016.

**Graph 9: Aggregate income in agriculture in million euro, 2016-2017**

## Methodology of Economic Accounts for Agriculture

Economic Accounts for Agriculture (EAA) are the satellite accounts of the European System of Integrated Economic Accounts (ESA), an accounting system that follows the recommendations of the UN for national accounts. They cover agricultural products and services produced during the accounting period that have been sold by agricultural units or kept in farm stocks or are used for further processing by agricultural producers.

EAA aims to highlight economic development in the national agricultural sector and can be used as a basis for assessing agricultural sector changes in the agricultural sector.

Economic Accounting concepts for Agriculture are adapted to the particular nature of agricultural production: for example, Agricultural Accounts for Agriculture include not only the production of grapes and olives, but also the production of wine and olive oil from agricultural producers as well as information related to the consumption of crop products used in animal feed. EAA data can be used to calculate indicators of income for the agricultural sector.

Economic Accounts for Agriculture report production values and expenditures, both by producer prices and basic prices.

Economic Accounts for Agriculture with basic prices include direct payments (subsidies), which are not included in the Economic Accounts for Agriculture at producer prices. Moreover, direct payments are divided into direct payments related to the product, respectively the output. Direct producer-related payments, such as the environmental, are reported under a separate item.

### Definitions and explanations

EAA includes:

- + The value of crop output
- + The value of animal output
- + Income from agricultural services
- = Total agricultural output

- Intermediate consumption
- = Gross value added
- Consumption of fixed capital
- = Net value added
  
- + Other subsidies on production
- = Income factor
  
- Employee compensation
- = Net operating surplus
  
- Rent
- Interest
- = Net entrepreneurial income

Net operating surplus estimates land yield, capital and unpaid work. It is the balance of income generation, which shows the distribution of income between the factors of production and the general government sector. Net value added and net operating surplus are calculated for industries.

The net added value of primary agricultural production measures the value created by all agricultural units after the consumption of fixed capital.

The gross added value of primary agricultural production measures the outputs. This is the difference between the output value and the intermediate consumption value.

# Kosovo Agency of Statistics

## *short description*

**Kosovo Agency of Statistics** is a professional institution which deals with collection, processing and publication of official statistical data. As such acts since 1948 and has passed through several historical stages, structured according to state regulation of those times.

On 2 August 1999, the Agency has resumed his professional work (after nine years of interruption of all statistical series detrimental to the interest of Kosovo), as an independent institution under the Ministry of Public Administration. Since 12.12.2011 the Agency operates in the frames of the Prime Minister's Office. Office is funded by the Kosovo Consolidated Budget, but also by donors for specific projects and for technical professional support.

**Kosovo Agency of Statistics** acts according to the Law No. 04/L-036 which entered into force on 12.12.2011. Programme of Official Statistics 2013/2017 is in implementation for the development of statistical system in correlation with the European Union statistics (EUROSTAT).

**Kosovo Agency of Statistics** has this organizational structure: production departments; (Department of Economic statistics and National Accounts, Department of Agriculture and Environment statistics and Department of Social statistics. **Support Departments**; Department of Methodology and Information Technology, Department of Policy Planning, Coordination and Communication, Department of Census and survey and Department of Administration. **Within the Agency are also established Regional Offices**; Gjakove, Gjilan, Mitrovica, Peja, Prizren, Pristina and Ferizaj

In KAS are employed in total 147 workers, of whom 100 (68,0 %) at the headquarters of the Agency, while in the Regional Offices, 47 (32,0%). Agency's educational qualifying structure is as follows: 73,5% with university education, 13,6% with with non-tertiary education, and 12.9% with secondary education.

We have professional and technical cooperation with all Ministries of the Government of Kosovo, especially with the Ministry of Economy and Finance, Central Bank of Kosovo, with international institutions, EUROSTAT, International Monetary Fund, World Bank, Sweden's SIDA, DFID, UNFPA, UNDP, UNICEF, and with the statistical institutions of the countries in the region.

**Kosovo Agency of Statistics** almost completely covers the territory of Kosovo, based on the statistical structure of the enumeration areas as the basic unit and sole in the country from which it gets first hand information. All surveys conducted in the field use the extension of the samples in these enumeration areas but also a statistical methodology according to international recommendations. During the collection of statistical data and reports from reporting entities are involved professionals, technicians, administrators, servants of the country offices, field enumerators from regional offices, etc.

In 2011, the project of Population Census , Households and Dwellings was successfully implemented, and in 2014 was successfully carried out the Agriculture Census. The result obtained from these censuses will have an important role in the development policies.

**The mission of the Agency**; to meet the needs of users with qualitative statistical data, objective, in time and space so that users have reliable base to conduct regular analysis in the interest of planning and project development at the municipal and country level. To support government institutions, scientific institutes, research academies, businesses in order to provide proper information for decision-makers and other users in Kosovo.
